# Botswana

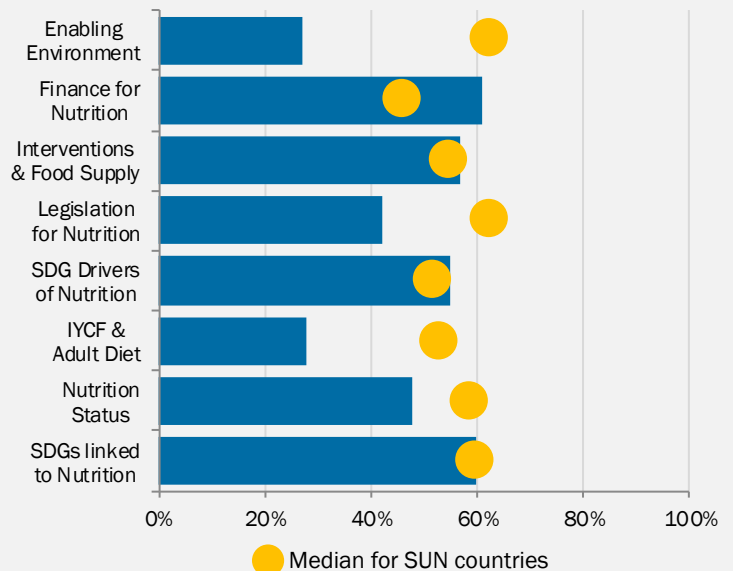

## BOTSWANA

The Country Dashboard provides an overview on the progress using a standard set of indicators that cover different dimensions of the SUN Movement Theory of Change, from commitments to actions to results to impacts.

Data for Botswana are available for 63/79 (80%) indicators mostly covering the timeframe 2007-2016. Based on the data, Botswana is progressing with moderate performance in finance, the underlying drivers of nutrition, health interventions, food supply and SDGs linked to nutrition. However, more could be done for the enabling environment (especially the networks), legislation (including fortification and restrictions on marketing of food and beverages to children), and infant and young child feeding (IYCF) practices to address the double burden of child stunting and overweight and obesity among children and women. There is a lot of missing data, especially for indicators related to interventions and food supply, underlying drivers, and IYCF practices.

This dashboard can be adapted for use at sub-national level and complemented with additional indicators based on data availability. The selected indicators are aligned with globally agreed frameworks for nutrition and with the SDGs indicators
