

## COUNTRY DASHBOARD

# Guinea-Bissau

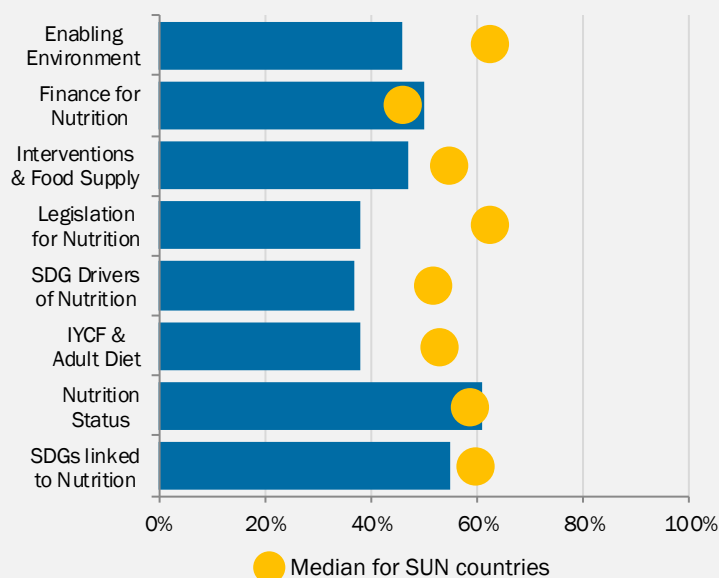

## GUINEA-BISSAU

The Country Dashboard provides an overview on the progress using a standard set of indicators that cover different dimensions of the SUN Movement Theory of Change, from commitments to actions to results to impacts.

Data for Guinea-Bissau are available for 67/79 (85%) indicators mostly covering the timeframe 2010-2016. Based on the data, Guinea-Bissau is showing good progress in the coverage of several interventions, including Vitamin A supplementation, SAM treatment, ORS/zinc and ITN use, as well as exclusive breastfeeding practices. However, more could be done to advance with the enabling environment (namely issues related to network functionality and SUN processes), finance for nutrition, and addressing underlying drivers of nutrition including improving food supply and dietary intake in order to address the burden of malnutrition, in particular the high prevalence of anaemia and overweight/obesity among women. The issue of missing data is also noted.

This dashboard can be adapted for use at sub-national level and complemented with additional indicators based on data availability. The selected indicators are aligned with globally agreed frameworks for nutrition and with the SDGs indicators
