

# Ethiopia

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

## SUN MOVEMENT THEORY OF CHANGE

## Ethiopia

Joined the SUN Movement in 2010

**Population** 104,957,000  
(UNPD 2017)

**Income class** Low income  
(World Bank 2019)

**Humanitarian risk class** Very High  
(INFORM 2019)

Data for Ethiopia are available for 73/85 (86%) MEAL indicators, with most covering the timeframe 2015-2018. Based on the data, Ethiopia is showing strong performance in the enabling environment, finance for nutrition, nutrition status and the nutrition-related SDGs domains. However, more could be done for scaling up high impact interventions and food supply, enacting legislation (particularly the BMS Code and food fortification), addressing underlying drivers of nutrition (especially WASH, undernourishment and gender-related indicators), and the promotion of optimal child feeding and dietary intake behaviours to address the high prevalence of child stunting and underweight among women.

## Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
