

Malawi

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

SUN MOVEMENT THEORY OF CHANGE

Malawi

Joined the SUN Movement in 2011

Population 18,622,000
(UNPD 2017)

Income class Low income
(World Bank 2018)

Humanitarian risk class Medium
(INFORM 2019)

Data for Malawi are available for 76/85 (89%) MEAL indicators, with most covering the timeframe 2015-2018. Based on the data, Malawi is progressing very well with strong performance in the enabling environment, high impact interventions and food supply, legislation (with the exception of maternity protection and restrictions on marketing of food and beverages to children), the uptake of breastfeeding behaviours, and nutrition status with the exclusion of child stunting and anaemia among women. However, more could be done for the data availability of government finance for nutrition, addressing underlying drivers (especially basic water access, the disease burden and food insecurity), and improving child feeding and population diet behaviours to reduce stunting and anaemia levels.

Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
