

# Nigeria

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

## SUN MOVEMENT THEORY OF CHANGE

## Nigeria

Joined the SUN Movement in 2013

**Population** 190,886,000  
(UNPD 2017)

**Income class** Lower middle income  
(World Bank 2018)

**Humanitarian risk class** Very High  
(INFORM 2019)

Data for Nigeria are available for 78/85 (92%) MEAL indicators, with most covering the timeframe 2015-2018. Based on the data, Nigeria is progressing relatively well with strong performance in the enabling environment and legislation for nutrition (notably food fortification). However, more could be done to increase funding for nutrition (both government and donor), address underlying drivers (including WASH, infectious diseases and gender-specific indicators), and scale-up high impact nutrition and health interventions, including promotion of optimal IYCF practices, to address the high prevalence of child undernutrition and anemia, overweight, and obesity among women.

## Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
