

Papua New Guinea

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

Data for Papua New Guinea are available for 53/85 (62%) MEAL indicators, with most covering the timeframe 2006-2018. Based on the data, Papua New Guinea has made good progress with inclusion of key nutrition targets in the national plan, legislation for food fortification, and high exclusive breastfeeding rates. However, more could be done to build an enabling environment for improving nutrition, increase funding for nutrition, strengthen child and maternal legislation, and improve WASH-related underlying drivers of nutrition to reduce the double burden of undernutrition and overweight/obesity among children and women. There is a lot of missing data, especially for indicators related to government finance, interventions and food supply, and infant and young child feeding (IYCF) practices.

Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
