

# Senegal

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

## SUN MOVEMENT THEORY OF CHANGE

## Senegal

Joined the SUN Movement in 2011

**Population** 15,851,000  
(UNPD 2017)

**Income class** Low income  
(World Bank 2018)

**Humanitarian risk class** Medium  
(INFORM 2019)

Data for Senegal are available for 74/85 (87%) MEAL indicators, with most covering the timeframe 2015-2018. Based on the data, Senegal is progressing very well with strong performance in the enabling environment (especially including nutrition targets in the national plan) and legislation for nutrition, as well as good performance on intervention coverage, consumption of fortified wheat flour, and the underlying drivers of nutrition (except for gender-specific indicators). However, more could be done on finance (missing data on national budget for nutrition), improving micronutrient intervention coverage and food supply, and increasing uptake of optimal child feeding and dietary intake behaviours to address the excessive double burden of malnutrition, especially anaemia and overweight/obesity among women.

## Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
