

COUNTRY DASHBOARD

South Sudan

SOUTH SUDAN

The Country Dashboard provides an overview on the progress using a standard set of indicators that cover different dimensions of the SUN Movement Theory of Change, from commitments to actions to results to impacts.

Data for South Sudan are available for 47/79 (59%) indicators mostly covering the timeframe 2009-2016. Based on the data, South Sudan is progressing with a multi-stakeholder platform and strong uptake of breastfeeding behaviours. However, more could be done for the enabling environment, legislation, and scaling up of high impact interventions, including infant and young child feeding (IYCF) practices and food supply, to address the high prevalence of malnutrition among children and anaemia among women. A multi-sectoral approach is required to improve the underlying drivers of nutrition. A lot of missing data is noted, especially for indicators related to government finance, interventions and food supply, young child feeding practices, and adult nutrition status.

This dashboard can be adapted for use at sub-national level and complemented with additional indicators based on data availability. The selected indicators are aligned with globally agreed frameworks for nutrition and with the SDGs indicators
