

Sri Lanka

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

SUN MOVEMENT THEORY OF CHANGE

Sri Lanka

Joined the SUN Movement in 2012

Population 20,877,000
(UNPD 2017)

Income class Lower middle income
(World Bank 2018)

Humanitarian risk class Medium
(INFORM 2019)

Data for Sri Lanka are available for 68/85 (80%) MEAL indicators, with most covering the timeframe 2016-2018. Based on the data, Sri Lanka is progressing very well with strong performance in the enabling environment, underlying drivers for nutrition, and nutrition-related SDG's as well as high uptake of exclusive breastfeeding and low prevalence of child stunting and overweight/obesity in both children and women. However, more could be done on food-related legislations, and the scaling up of high-impact maternal and child nutrition interventions to address the high prevalence of child wasting and anaemia and underweight among women. Missing data on finance, nutrition interventions and child feeding practices is also noted.

Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
