

Eswatini

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

Data for Eswatini are available for 73/85 (86%) MEAL indicators, with most covering the timeframe 2014-2018. Based on the data, Eswatini is progressing relatively well with strong performance in high impact interventions and food supply, and moderate performance in legislation and underlying drivers of nutrition. However, more could be done for the enabling environment (including establishing business and civil society networks), finance for nutrition (where missing data is noted), and enacting legislation (specifically the BMS Code and food fortification) to address the high prevalence of anaemia, hypertension, diabetes, and overweight/obesity among women as well as reduce overweight in children and adolescents.

Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
