

Zambia

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

SUN MOVEMENT THEORY OF CHANGE

Zambia

Joined the SUN Movement in 2010

Population 17,094,000
(UNPD 2017)

Income class Lower middle income
(World Bank 2018)

Humanitarian risk class Medium
(INFORM 2019)

Data for Zambia are available for 74/85 (87%) MEAL indicators, with most covering the timeframe 2013-2018. Based on the data, Zambia is progressing relatively well with strong performance in the enabling environment, finance for nutrition and uptake of breastfeeding, as well as moderate performance in legislation. However, more could be done to improve food supply, address underlying drivers of nutrition, and scale-up coverage for high impact interventions, including promotion of optimal child feeding practices, to address the high prevalence of child stunting, and double burden of anaemia and overweight/obesity among women.

Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
