

Central African Republic

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

SUN MOVEMENT THEORY OF CHANGE

Central African Republic

Joined the SUN Movement in 2017

Population 4,659,000
(UNPD 2017)

Income class Low income
(World Bank 2019)

Humanitarian risk class Very High
(INFORM 2019)

Data for Central African Republic are available for 75/85 (88%) MEAL indicators, with most covering the timeframe 2010-2018. Based on the data, Central African Republic is making progress with strong performance in finance for nutrition and moderate performance in legislation (especially maternity protection, right to food recognition, and restrictions on marketing of food and beverages to children). However, more could be done for the enabling environment, underlying drivers of nutrition, infant and young child feeding practices, and scaling up of high impact interventions and food supply to address the high prevalence of child stunting and double burden of malnutrition, including high anemia, underweight, diabetes and hypertension among women.

Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
