

Liberia

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

SUN MOVEMENT THEORY OF CHANGE

Liberia

Joined the SUN Movement in 2014

Population 4,732,000
(UNPD 2017)

Income class Low income
(World Bank 2019)

Humanitarian risk class High
(INFORM 2019)

Data for Liberia are available for 72/85 (85%) MEAL indicators, with most covering the timeframe 2013-2018. Based on the data, Liberia is making progress with strong performance for some interventions (particularly vitamin A supplementation and iodized salt coverage), food fortification legislation, and the uptake of exclusive breastfeeding. However, more could be done to build the enabling environment for improving nutrition, increase finance for nutrition, address underlying drivers of nutrition, and scale-up high impact interventions, including young child feeding behaviours and food supply, to address the high prevalence of child stunting and anemia, overweight and obesity among women.

Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.
