**Uganda**

 Joined the SUN Movement in 2011

**Population** 42,863,000 (UNPD 2017)

**Income class** Low income (World Bank 2019)

**Humanitarian risk class** High (INFORM 2019)

The Scaling Up Nutrition (SUN) Movement Monitoring, Evaluation, Accountability and Learning (MEAL) System was developed for the SUN Strategy 2016-2020. It identifies a wide range of desired results and associated indicators of progress across eight domains in which the SUN Movement seeks to catalyze change and deliver nutrition impact. These results correspond to the steps in the SUN Movement Theory of Change.

The Country Dashboard provides an overview of progress using a set of indicators aligned with globally agreed frameworks for nutrition and the SDG Framework. It is designed to support SUN Movement stakeholders at all levels to assess performance and inform strategic decisions towards ending all forms of malnutrition.

Data for Uganda are available for 79/85 (93%) MEAL indicators, with most covering the timeframe 2015-2018. Based on the data, Uganda is progressing very well, with strong performance on the enabling environment, interventions and food supply, legislation for nutrition, uptake of breastfeeding and dietary intake behaviours, as well as the nutrition status of women and children. However, more could be done to enhance a multi-sectoral approach for improving the underlying drivers of nutrition (especially those related to WASH, infectious diseases and gender-related indicators), and scale-up coverage of high impact interventions, including young child feeding practices, to further reduce child stunting and the double burden of malnutrition, including anemia during pregnancy, overweight/obesity and hypertension among women.

A detailed description of the MEAL Results Framework and Lists of Indicators, including definitions and data sources, is available at [http://bit.ly/sunmeal](http://bit.ly/sunmeal). The MEAL system relies mainly on existing data sources, gathered from validated global datasets (e.g. WHO, UNICEF, FAO and other) but also data collected by the SUN Secretariat and SUN Networks. This dashboard can be adapted for use at sub-national level and complemented with additional indicators based on data availability.
### Enabling Environment

As stakeholders from different sectors come together to build an enabling environment for improving nutrition, it results in a multi-stakeholder platform, functioning networks of nutrition actors, progress in the SUN Movement processes, integration of nutrition in development plans and improved nutrition information systems.

### Finance for Nutrition

As multiple stakeholders mobilize resources, the results include increased spending for evidence-based high-impact nutrition actions from both national and external funding sources.

### Interventions and Food Supply

As multiple stakeholders mobilize resources and align their actions, the results include increased coverage of nutrition actions, increased diversity and quality of food supply, and equitable geographic distribution of nationally agreed core actions and implementation capacity for nutrition.

</tbody>
</table>

Note: The classification is based on performance relative to other SUN countries except when established cut-offs are available. The “green” colour indicates “good” performance, intervention coverage or nutrition status in relative terms. It does not represent that this target has been fully met.

Updated September 2019

This work was supported by Nutrition International under the Technical Assistance for Nutrition (TAN) project, funded with UK aid from the UK government.
